

Sample Input Walkthrough

Adding a congregation -

addCongregation <name-string> <type-string> <start-date-string> <end-date-string>

Note - Adding a congregation with wrong dates like start date > end date or adding a congregation in the past date will give an error.

- *addCongregation* "Paris Olympics 2024" "Games" "2024-07-01" "2024-06-28" //invalid -1
- *addCongregation* "Paris Olympics 2024" "Games" "2024-10-01" "2024-10-28" //valid 0
- *addCongregation* "U-17 Football World cup" "Games" "2024-11-01" "2024-11-02"
- *addCongregation* "Summer fest" "Concert" "2024-11-01" "2024-11-05"

Viewing all congregations -

- *showCongregations*

Note - This lists down the congregations in the order in which they were inserted.

Adding a venue -

addVenue <name-string> <location-string> <capacity-integer>

The location string is of the type - location-address:city:state:postal-code:country

- *addVenue* "Paris stadium" "ParisStadium:Paris:Ile-de-France:932100:France" 20000
- *addVenue* "Lyon stadium" "LyonStadium:Lyon:Ile-de-France:932101:France" 10000
- *addVenue* "Parc des Princes" "FootballStadium:Paris:Ile-de-France:932102:France" 50000

Viewing a venue -

showVenues <location-string> where the location-string is of the form - "city:state:postal-code:country"

While searching for a venue, you can provide granularity through "city:state:postal-code:country".

Note that some of the substring can be empty and you will need to do a string match.

- *showVenues* "Paris:Ile-de-France::France"

Reserving a venue -

reserveVenue <venue-name-string> <venue-country-string> <congregation-name-string>

Note - A venue can only be reserved if the congregation and the venue already exist.

- *reserveVenue* "Paris stadium" "France" "Paris Olympics 2024"
- *reserveVenue* "Lyon stadium" "France" "Paris Olympics 2024"
- *reserveVenue* "Parc des Princes" "France" "U-17 Football World cup"

Viewing reserved venue -

showReserved <congregation-name-string>.

If the congregation doesn't exist it fails, else it prints the reserved venues.

- *showReserved "Paris Olympics 2024"*

Freeing a reserved venue -

freeVenue <venue-name-string> <venue-country-string> <congregation-name-string>

- *freeVenue "Lyon stadium" "France" "Paris Olympics 2024"*
- *showReserved "Paris Olympics 2024"*

Adding an event -

*addEvent <congregation-name-string> <venueName-string> <venueCountry-string>
<date-string> <fromTime-string> <toTime-string> <eventName-string>*

Note - You can only add events to a venue on only those days where the congregation has a reservation at that venue.

It should also follow a valid date format.

- *addEvent "Paris Olympics 2024" "Paris stadium" "France" "2024-10-01" "12:00" "15:00" "Javelin Throw"*
- *addEvent "Paris Olympics 2024" "Paris stadium" "France" "2024-10-01" "18:00" "21:00" "Pole Vault"*
- *addEvent "Paris Olympics 2024" "Paris stadium" "France" "2024-10-02" "12:00" "15:00" "5000m Mens"*
- *addEvent "U-17 Football World cup" "Parc des Princes" "France" "2024-11-02" "18:00" "21:00" "Spain vs England"*

Viewing events -

showEvents <venueName-string> <venueCountry-string> <date-string>

- *showEvents "Paris stadium" "France" "2024-10-01"*
- *showEvents "Parc des Princes" "France" "2024-11-02"*

Deleting an event -

*deleteEvent <congregation-name-string> <venueName-string> <venueCountry-string>
<date-string> <fromTime-string> <eventName-string>*

- *deleteEvent "Paris Olympics" "Paris stadium" "France" "2024-10-01" "12:00" "Javelin Throw"*

- showEvents "Paris stadium" "France" "2024-10-01"

Deleting a venue -

deleteVenue <name-string> <country-string>

Note - A venue can't be delete if it is already reserved for some congregation. In the example below, it fails and returns -1.

- deleteVenue "Parc des Princes" "France"

Viewing a calendar -

showCalendar <congregation-name> <venueName-string> <venueCountry-string>

Note - You first print the total number of events added for the congregation at that venue in the first line.

The next N lines would span the duration of the congregation (say N days) and print the number of events for that day.

Followed by the details of those events in a new line.

- showCalendar "U-17 Football World cup" "Parc des Princes" "France"

In this case, the congregation "U-17 Football World cup" spans 2 days i.e 2024-11-01 - 2024-11-02 with only 1 event on 2024-11-02.

So the output becomes -

```
1 //Only 1 event throughout the congregation
2024-11-01 0 //No events on the first day
2024-11-02 1 //1 event on the second day
Spain vs England 18:00 21:00 //details of that event. (Make a function call to the show
events in a particular day)
```

Deleting a congregation -

deleteCongregation <name-string>

Note - deleting a congregation removes all reservations on all venues.

So removing the "U-17 Football World cup" congregation removes the reservation on the venue "Parc des Princes" which can now be deleted.

- deleteCongregation "U-17 Football World cup"
- deleteVenue "Parc des Princes" "France" //success
- showCongregations

End
